

Dear colleagues,

It's a great pleasure to invite you to the '2nd International Congress on Neurobiology, Psychopharmacology and Treatment Guidance', which will take place in Thessaloniki Greece, on November 24th - 27th, 2011.

Following the great success of the 1st congress which took place in 2009, the 2nd congress will also aim at being valuable for the clinician who struggle daily in the front line for the treatment of real-world patients. In this frame, our goal is to provide a global and comprehensive update of the newest developments in Psychiatry and the allied sciences in a way which should be both focused and enriched. World wide experts have been invited to share with us their knowledge and experience for once more under the support and guidance of the European Psychiatric Association and the World Psychiatric Association, under the Auspices of the School of Medicine, Aristotle University of Thessaloniki.

Teaching clinical usefulness and applications of updated knowledge and informed treatment with psychopharmacological agents in a truly multidisciplinary approach is the central axis of this meeting and although the congress will embrace high tech research concerning psychopathology, new treatment methods, genetics and molecular biology, it also aims on emphasizing on the human factor, for both therapists and the patients.

Apart from the humanistic tradition of Psychiatry and life sciences, the continuous and unconditional investment on the high level training of professionals and education of patients and their families, emerged as a significant challenge during the last few decades. Medical scientists and public health policy makers are increasingly concerned that the scientific discoveries are failing to be translated efficiently into tangible human benefit. Today, in an all the more complex and technologically advanced environment, the human factor emerges again as the most valuable one, the factor that determines the final outcome.

We are also counting on your active participation through the presentation of your work on all mentioned topics. Your participation and submissions will be highly appreciated.

As hosts and organizers, I shall spare no effort in making your participation scientifically rewarding and meaningful and your stay in the hospitable city of Thessaloniki and Greece an enjoyable and unforgettable experience.

Konstantinos N. Fountoulakis
Assist. Professor of Psychiatry,
Aristotle University of Thessaloniki, Greece

Chair of the Organizing Committee
2nd International Congress on Neurobiology,
Psychopharmacology & Treatment Guidance
